

How to clean and maintain your garden well with WESSOCLEAN® AQUA TYP 1 in just 4 easy steps

1. Be well prepared!

You have a garden well up to 10 m in depth.
You need 1 bucket, 1 hose, 1 funnel and 2 x 400g bags of WESSOCLEAN® AQUA TYP 1.

Dissolve 2 bags in 10 litres of cold water while stirring slowly.
Dismantle the pump part or the well pump. In case of electric pump, separate the connection to the suction line.

2. Let's start!

Fill the entire working solution slowly into the well via a funnel and a garden hose.

If necessary, shorten the garden hose.

3. Wait and see and drink tea!

Let WESSOCLEAN® AQUA TYP 1 react in the well for 12 to 14 hours.

NOTE: don't keep the working solution in the well for longer than 24 hours !

4. All hands on the pump !

After the reaction time of 12 to 14 hours, pump out the well via the reinstalled pump until the water is clear.

NOTE: all connections that were previously disconnected should be completely closed with a sealing tape e.g. hemp.

The pumped-out water can be disposed safely via compost, lawn, or wastewater.
